

# Redmenta, a Bett Award Winner solution, is an AI content creator tool customisable for any standards and curriculum.

The attention span of the younger generation is short. Active learning has proven to be effective in engaging students. But it requires significantly more time to provide such an activity.

**Teachers can save 4 hours of work by generating auto-evaluating tests, quizzes, and interactive content that facilitates project-based learning or games.**

With Redmenta's advanced prompt builder, teachers and creators can craft their blueprint, guiding AI to generate tailored content for any national curriculum, standards like IELTS or IB, or project-based learning and role-playing games.

The interactive content generated in Redmenta can be diverse. Students can conduct research work and problem maps or concept boards. They can also utilise the platform to set up algorithms or family trees using flowcharts, discuss the topic with the AI, and even record video presentations. With Redmenta, students can engage in peer or group reviews, unlocking their full potential.

We look forward to meeting schools that prioritise modern pedagogy and content creators who seek thoroughly customisable generative AI solutions.
